EXECUTIVE SUMMARY
PHASE 1 ENVIRONMENTAL SITE ASSESSMENT
MOREAU 2 AND 3
TOWN OF MOREAU, NEW YORK

Hanson Van Vleet, PLLC (HVV) performed a Phase 1 Environmental Site Assessment (ESA) of lands and improvements at the site (Property), comprised of ten parcels with a total area of 72.0 acres, identified by the client as Moreau 2 and 3 in the Town of Moreau, Saratoga County, New York. The Property was inspected on April 3, 2026.

The Property is located in the Town of Moreau east, west, and south of Farnan Road and east of Sisson Road. The Property is presently accessed off the east and west sides of Farnan Road, approximately 2,500 to 3,000 feet south-southeast of the intersection of Farnan Road and Bluebird Road. The Property is comprised of ten (10) parcels. The Saratoga County Assessor's information for the ten parcels is summarized in the following table.

Parcel Address	Parcel Tax ID Number	Parcel Area
48-56 Farnan Road	50.-4-6	17.34 acres
78-104 Farnan Road	50.-4-11	21.73 acres
69 Farnan Road	50.-4-12	11.33 acres
2-6 Corporate Place	50.-4-13	2.71 acres
1-5 Corporate Place	50.-4-14	2.86 acres
2-6 Electric Drive	50.-4-16	3.07 acres
8-12 Electric Drive	50.-4-22	2.82 acres
7 Corporate Place	50.-4-23	3.05 acres
8 Corporate Place	50.-4-25	2.90 acres
Farnan Road (Town of Moreau)	50.-4-96.1	4.19 acres

Together, the ten parcels at the Property have a total area of approximately 72.0-acres of unimproved land comprised of predominately woodlands with some unimproved vacant field areas. The current owner of record of nine of the parcels is Moreau Industrial Park, LLC. One 4.19-acre parcel is an unimproved road owned by the Town of Moreau.

The Property is located within a suburban area in the Town of Moreau. The Property and surrounding area are a mix of industrial, residential, vacant meadow, and wooded properties. The subject Property is bordered on the east by the Hudson River, on the south by wooded lands of Vincent Paul Sporrer and Niagara Mohawk Power Corp, on the west by a National Grid Right-of-Way containing power transmission lines and additional wooded lands owned by the Moreau

Industrial Park, LLC, and on the north by wooded and open lands of the Town of Moreau.

During the inspection, the ten parcels at the Property were predominately wooded lands with some unimproved vacant field areas. Most of the topography is relatively even with steep slopes along the eastern, southern, and southwestern perimeters. Several gullies and unnamed intermittent streams were present. An unimproved access road runs east-west along the north side of the northwestern parcels. A parcel owned by the Town of Moreau consisting of a grassy, leaf litter covered trail extends the footprint of Farnan Road to the south. Several grassy unimproved trails covered with leaf litter run east to west through the Property. A gravel path borders the northeastern parcel along the north and east sides and the southeastern end terminates at a metal gate. Utility lines run along the east side of Farnan Road along the west side of the northeastern parcel. A power line Right-of-Way with unimproved road and gated access was present along the northwestern parcel boundaries. No other utilities were identified on the Property. No recognized environmental concerns (RECs) were identified during the inspection of the subject Property.

Based on the review of county records, city directories, aerial photographs, and historical topography maps, the subject Property was a woodland dating back to at least the early 1940s.

A review of State and Federal environmental databases identified thirty-nine (39) listings of potential environmental concern within the ASTM search radius and in the study area. Based on the closed status and distant location of NY Spills listings, and long history of remedial actions taken at distant Superfund sites, the identified listings were not considered to represent a REC to the subject Property.

The subject Property was identified as a NY AIRS (Aerometric Information Retrieval System Data) site. The NY AIRS listing is related to permits obtained to construct and operate a wood pellet manufacturing plant on or near the subject Property which was never constructed. The NY AIRS listing does not represent a REC in connection with the subject Property.

A nearby industrial site at 64 Farnan Road, located adjacent to the subject Property, was identified as Hexion Inc. on the NY Spills list, the RCRA-LQG (Large Quantity Generator) list, US AIRS, E MANIFEST (Electronic waste manifests) list, NY MANIFEST (hazardous waste manifests) list, NY CBS (Chemical Bulk Storage) list, NY CBS AST (Chemical Bulk Storage Above-ground Storage Tank list), and NY SPILLS list. The facility at 64 Farnan Road was also identified as Momentive Specialty Chemicals, Inc. on the PA MANIFEST and PFAS ECHO list. No open violations were noted among the database records for the US AIR MINOR, RCRA SQG (Small Quantity Generator), E MANIFESTS, MANIFESTS, CBS and CBS AST listings. The site is a chemical manufacturing facility utilizing various chemicals stored in several above ground storage tanks (ASTs) including formaldehyde, sodium hydroxide, and methanol. In 2022, roughly 8,500 gallons of formaldehyde leaked from a tank into a secondary containment from a malfunctioning seal. The company began air monitoring and diluting the formaldehyde with water before being pumped back into their process. The spill was closed later that year. On June 11, 2012, a spill of 10 gallons of “Therminol” heat transfer fluid at the Hexion facility was attributed to an equipment failure and a faulty tube was found and repaired. The spill affected an asphalt area and adjacent rocks which were promptly cleaned up, and the spill was closed by NYSDEC on June 14, 2012. The second spill, dated May 1, 2006, involved a release of 55 to 150 gallons of heat transfer fluid

as a result of a tube failure at the facility, then operated by Momentive Specialty Chemicals. The heat transfer fluid spilled on a large portion of the roof, back asphalt driveway, and associated grassy areas. The spill was remediated by absorbent material, cleaning, and excavation of affected soil areas. The NYSDEC closed the spill on August 31, 2007. Based on the closed status of the spill events, proper registration of chemical ASTs, federal registration for air quality monitoring, and RCRA registration with wastes transported under manifests, the chemical facility at 64 Farnan Road site is not considered to represent an REC to the subject Property.

No RECs were identified in connection with the subject Property during the review of environmental database information.

Conclusions

Hanson Van Vleet, PLLC has performed a Phase 1 Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E1527-21 of the Property, comprised of ten parcels with a total area of 72.0 acres, identified by the client as Moreau 2 and 3 in the Town of Moreau, Saratoga County, New York. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report.

A recognized environmental condition (REC) refers to (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to release to the environment; under conditions indicative of a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment. The following RECs were identified during the course of this assessment:

- HVV did not identify any RECs in connection with the Property.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- HVV did not identify any CRECs in connection with the Property.

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- HVV did not identify any HRECs in connection with the Property.

1.0 INTRODUCTION

Hanson Van Vleet, PLLC, Inc. was retained by Nexamp to perform a Phase 1 Environmental Site Assessment (ESA) of the lands at the site (Property), comprised of ten parcels with a total area of 72.0-acres, identified by the client as Moreau 2 and 3 in the Town of Moreau, Saratoga County, New York. The total acreage of the ten parcels is 72.0-acres.

1.1 Purpose

The purpose of the ESA was to identify, to the extent feasible pursuant to the processes described in this report, any recognized environmental conditions in connection with the Property that could represent a present and/or future environmental liability and for the user to satisfy one of the requirements to qualify for innocent landowner defense to the Comprehensive Environmental Response Compensation and Liability Act (CERCLIS) liability. The investigation was performed in conformance with ASTM Practice E1527-21 and “all appropriate inquiries”.

1.2 Limitations

This report has been compiled for the exclusive use of Nexamp. This report and its contents represent confidential information and should not be duplicated without the expressed permission of Nexamp, their employees, successors and/or assigns.

This ESA has been performed and/or supervised by an Environmental Professional in accordance with generally accepted industry practices, including but not limited to ASTM Practice E1527-21. We also declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in section 312.10 of 40 CFR 321 and we have the specific qualifications based on education, training and experience to assess property of the nature, history and setting of the subject property. We have developed and performed the “all appropriate inquiries” in conformance with the general standards and practices set forth in 40 CFR Part 312. This ESA is based on the conditions observed by Hanson Van Vleet, PLLC during its inspection of the Property on April 3, 2026.

Hanson Van Vleet, PLLC has not conducted its own analytical and/or geotechnical investigation. Hanson Van Vleet, PLLC has used, where available, information derived from other sources exclusively to compile and address the opinion contained in this report. All discussions, findings, opinions and conclusions are based on information which Hanson Van Vleet, PLLC received and understood to be factual. Hanson Van Vleet, PLLC has not attempted to verify all data received or reviewed. In accordance with ASTM Practice E1527-21, HVV has not confirmed that the property is in compliance with all regulatory agencies, but where feasible has offered an opinion as to the compliance of the property. The findings, opinions and conclusions in this report should not be considered as scientific certainties, but as probabilities and/or professional opinions based on professional judgment concerning the significance of the limited data reviewed during this evaluation.

In accordance with 40 CFR Part 312 and ASTM Practice E1527-21 it must be noted that it is the “users” responsibility to search for and determine the applicability and significance of any recorded environmental liens, environmental deed restrictions and legal activity and use limitations (UALs).

1.2.1 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted. Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.2.2 Additional Scope Limitations

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e. evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder.

1.3 Methods

Mr. Bernd Neumann of Hanson Van Vleet, PLLC, performed the site inspection, research and report preparation. Mr. James Gironda, P.G., Senior Hydrogeologist and Partner, Hanson Van Vleet, PLLC performed the project management and reviewed the report for quality and content. HVV personnel meet the definition of environmental professionals as described in ASTM Practice E1527-21. The methods utilized in the performance of this environmental assessment are outlined below.

1.3.1 Site Walk-Over

A visual inspection of the Property and surrounding lands was performed with particular attention paid to potential or existing:

- physical setting;
- surface conditions, drainage patterns and run-off, staining or spills and waste disposal areas;
- aboveground and/or underground storage tanks, and monitoring wells, particularly their location, utilization and physical integrity (if possible);
- chemical or waste loading and storage areas;
- transformers, florescent light ballasts or other electrical equipment that could contain PCBs or PCB contaminated dielectric fluid;
- asbestos and/or asbestos containing building materials; and,
- Lead-based paint.

1.3.2 Site Historical Review

Hanson Van Vleet, PLLC reviewed information on current and former uses of the Property through a review of city directories, aerial photographs, historical Sanborn maps, local and regional maps obtained by Hanson Van Vleet, PLLC, as available and personal interviews that could provide insight into potential environmental concerns associated with the Property. HVV has attempted to research the history of the property to at least 1940 or first development, if reasonably ascertainable.

1.3.3 Operations Information

Hanson Van Vleet, PLLC has reviewed the available information on current and former property uses that could present a current environmental concern. Representatives of the Property owners, Moreau Industrial Park, LLC, and the user, were unable to be interviewed with respect to the environmental conditions on the Property.

1.3.4 User Provided Information

The user provided the tax parcel ID numbers, legal description, and site plans for the user defined area at the Property. The user was not aware of any environmental liens or activity and use limitations in connection with the Property. The user did not have knowledge of commonly known and/or reasonably ascertainable information that revealed a recognized environmental condition in connection with the Property.

1.3.5 Regulatory Review/Compliance

Hanson Van Vleet, PLLC obtained from Environmental Data Resources, Inc. (EDR) an Environmental Radius Map Report with GeoCheck, including the available regulatory reports and databases prepared by the State of New York and the United States Environmental Protection Agency (USEPA). Hanson Van Vleet, PLLC reviewed these reports with respect to the environmental integrity of the Property and adjoining properties within the recommended ASTM radius that could present an environmental liability concern. Where applicable, a review of compliance with required environmental permits was also performed.

It should be noted that no regulatory environmental records exist prior to 1970, and limited environmental records exist prior to 1985. A summary of the regulatory information acquired during this evaluation is included in Table 1 below.

TABLE 1
REGULATORY DATABASE REVIEW

Brownfields	Brownfield cleanup & restoration program	State

1.3.6 Hydrogeological Review

Hanson Van Vleet, PLLC has evaluated the available geologic and hydrogeologic data specific to the Property and surrounding region to determine the potential for off-site impacts from any potential releases to the soil and/or groundwater. The potential for impacts from the surrounding areas was also addressed.

1.3.7 Records Review

The following agencies and organizations listed below were contacted during the completion of this assessment:

- Environmental Data Resources, Inc. (EDR)
- New York State Department of Environmental Conservation (NYSDEC)
- United States Geological Survey (USGS)
- Sanborn Insurance Map Company
- United States Environmental Protection Agency (USEPA)
- New York State Geological Survey
- United States Department of Agriculture (USDA)

- Saratoga County, New York, Real Property
- Town of Moreau, New York, Assessors Department
- Town of Moreau, New York, Building Department
- Town of Moreau, New York, Town Clerk

2.0 SITE DESCRIPTION AND BACKGROUND

2.1 Location and Legal Description

The Property is located in the Town of Moreau east, west, and south of Farnan Road and east of Sisson Road. The Property is presently accessed off the east and west sides of Farnan Road, approximately 2,500 to 3,000 feet south-southeast of the intersection of Farnan Road and Bluebird Road. The Property is comprised of ten (10) parcels, which comprise a total area of approximately 72.0 acres of unimproved vacant land. Information specific to the ten individual parcels at the Property is included in Section 4.1.1, Title and Deed Review. The current owner of record of nine of the parcels is Moreau Industrial Park, LLC. One 4.19-acre parcel is an unimproved road owned by the Town of Moreau.

2.2 Adjoining Properties and Surrounding Area

The Property is located within a suburban area in the Town of Moreau. The Property and surrounding area are a mix of industrial, residential, vacant meadow, and wooded properties. The subject Property is bordered on the east by the Hudson River, on the south by wooded lands of Vincent Paul Sporrer and Niagara Mohawk Power Corp, on the west by a National Grid Right-of-Way containing power transmission lines and additional wooded lands owned by the Moreau Industrial Park, LLC, and on the north by wooded and open lands of the Town of Moreau. The Hexion Industrial site is located north, south, and east of the Property boundaries. A small building owned by the Town of Moreau is located just west of the Hexion Industrial site and directly adjacent to the Property boundary.

2.3 Current Use of Property

Currently, the 72.0-acres at the Property are comprised of wooded lands with some unimproved vacant field areas and an unimproved road extension.

2.4 Description of Improvements

There are no structural improvements at the Property, and no active or known utility connections at the time of the inspection.

3.0 SITE RECONNAISSANCE/INSPECTION

3.1 Introduction

A site inspection was performed on April 3, 2026. At the time of inspection, the Property predominately consisted of wooded lands with some unimproved vacant field areas. A photographic log of the site inspection is included in Appendix A. A site schematic is included as Figure 2.

3.2 Exterior Inspection

The entirety of the Property consists of wooded lands with some unimproved vacant field areas. Most of the topography is relatively even with steep slopes along the eastern, southern, and southwestern perimeters. Several gullies are located in the southwestern section and drain into an unnamed intermittent stream that flows southerly along the southwestern portion of the Property. The intermittent stream flows into another intermittent stream located southwest of the Property which is tributary to the Hudson River. Another intermittent stream with a bedrock outcrop and waterfall is located in the central eastern section of the Property and drains easterly into the Hudson River. An intermittent stream is present at the southeastern corner of the northeastern parcel and drains into the Hudson River. No other significant topographical features of note were observed.

An unimproved access road runs east-west along the north side of the northwestern parcels. A parcel owned by the Town of Moreau consisting of a grassy, leaf litter covered trail extends along the footprint of Farnan Road to the south. This parcel extends the length of the Property terminating at a pile of logs and bisects the eastern and western parcels. The north entrance to the path is blocked by metal barriers at the south end of Farnan Road. Several grassy unimproved trails covered with leaf litter run east to west through the Property. A gravel path in good condition borders the northeastern parcel to the north and east, and the southeastern end terminates at a metal gate. Utility lines run along the east side of Farnan Road along the west side of the northeastern parcel. A power line Right-of-Way with unimproved road and gated access was present along the much of the western parcel boundaries. No other utilities were identified on the Property.

Several areas of miscellaneous refuse were noted in various sections of the Property. Two large piles of leaf and brush mulch with some orange construction fence were noted in the northwestern portion of the Property. Along the southern boundary of the southwest parcel, some refuse items consisting of older CRT type televisions, paint cans that appear to be empty or filled with dirt and leaves, and miscellaneous plastic and metal junk have been dumped in a gully leading to one of the intermittent streams. In the west-central portion of the Property, there were three truck tires and a 5-gallon bucket. The northeastern parcel contained the most refuse and consisted of several tires, a couch, 5-gallon buckets, a plastic tarp, and at least one household garbage bag with various plastic items. Some orange construction fence and PVC pipes were noted along the western boundary of this parcel. The miscellaneous refuse items and used tires were not considered to represent a REC to the subject Property.

No RECs were identified during the exterior inspection of the Property.

3.3 Interior Inspection

There were no structures present at the Property, thus no interior inspection was conducted.

4.0 RECORDS REVIEW

4.1 Historical Review

4.1.1 Title and Deed Review

The Property is located in the Town of Moreau east, west, and south of Farnan Road and east of Sisson Road. The Property is presently accessed off the east and west sides of Farnan Road,

approximately 2,500 to 3,000 feet south-southeast of the intersection of Farnan Road and Bluebird Road. The Property is comprised of ten (10) parcels. The Saratoga County Assessor's information for the ten parcels is summarized in the following table. The county assessor's records are included in Appendix B.

Parcel Address	Parcel Tax ID Number	Parcel Area
48-56 Farnan Road	50.-4-6	17.34 acres
78-104 Farnan Road	50.-4-11	21.73 acres
69 Farnan Road	50.-4-12	11.33 acres
2-6 Corporate Place	50.-4-13	2.71 acres
1-5 Corporate Place	50.-4-14	2.86 acres
2-6 Electric Drive	50.-4-16	3.07 acres
8-12 Electric Drive	50.-4-22	2.82 acres
7 Corporate Place	50.-4-23	3.05 acres
8 Corporate Place	50.-4-25	2.90 acres
Farnan Road (Town of Moreau)	50.-4-96.1	4.19 acres

Together, the ten parcels at the Property comprise approximately 72.0-acres of unimproved land comprised of predominately woodlands with some unimproved vacant field areas. The current owner of record of nine of the parcels is Moreau Industrial Park, LLC. One 4.19-acre parcel is an unimproved road owned by the Town of Moreau.

Nine (9) of the parcels at the Property have an identical historical deed record dating prior to 1940. The following table summarizes the deed record for the nine of the parcels at the Property owned by Moreau Industrial Park, LLC.

HISTORICAL DEED RECORD
NINE PARCELS IN TOWN OF MOREAU, NEW YORK

Name of Owner	Date of Acquisition	Book / Page (or reason)
Moreau Industrial Park, LLC	1/22/2008	2008/4199
Town of Moreau	8/26/1994	1393/539
Moreau Park, Inc.	10/28/1927 & 5/9/1930	348/201 & 361/244
Union Bag & Paper Corporation	Unknown	Unknown

HISTORICAL DEED RECORD
PARCEL ID# 50.-4-96.1
TOWN OF MOREAU, NEW YORK

Name of Owner	Date of Acquisition	Book / Page (or reason)
Town of Moreau	5/4/1994	1393/542
Moreau Park, Inc.	Unknown	Prior deed not referenced

The deed at Book 1393, Page 542 included a total of four parcels on Farnan Road and Railroad Drive deeded to the Town of Moreau. One of the four parcels in the deed is identified as the southern part of Farnan Road. HVV could not confirm the parcel was part of the lands acquired by Moreau Park from Union Bag and Paper Corporation in 1927 or 1930.

No RECs were identified during the review of deeds for the subject Property.

4.1.2 City Directory Search

City directories were not available for the area of the subject Property or surrounding area.

4.1.3 Sanborn Insurance Maps

Sanborn Insurance maps were not available for the area of the subject Property.

4.1.4 Historical Aerial Photographs

Aerial photographs were reviewed for the years 1942, 1947, 1960, 1964, 1979, 1986, 1995, 2006, 2009, 2013, 2017, 2021, and 2024. The aerial photographs are included in Appendix C. A summary of the aerial photograph review is provided below.

2024 2021 2017 2013 2009 2006	The aerial photos depict most of the Property as wooded lands and the surrounding area similar to current conditions. The Property is bisected by Farnan Road and another road to the northwest, both of which degrade into an unmaintained path in more recent photos. A gravel path is shown around the northwestern parcel. Powerline Right-of-Ways are shown to the west and north followed by additional wooded lands. The Hexion industrial site is present south, east, and north of the Property boundaries. The Town of Moreau building is just west of the industrial plant. Some suburban residences are shown to the southwest.
--	---

1995	The aerial photos depict about 60% of the Property as wooded lands. Cleared areas are in the center and north. Farnan Road is shown as a gravel road in good condition running north-south in the middle of the Property. A gravel path is shown around the northwestern parcel. Powerline Right-of-Ways are shown to the west and north followed by additional wooded lands. The Hexion industrial site and Town of Moreau building are not shown. Some suburban residences are shown to the southwest.
1986 1979 1964 1960 1947 1942	The aerial photos depict the entirety of the Property as wooded lands. Farnan Road and other trails and paths are not shown. Powerline Right-of-Ways are shown to the west and north followed by additional wooded lands. An unimproved road is shown to the northwest. The Hexion industrial site and Town of Moreau building are not shown. Some rural residences are shown to the southwest, with one rural residence shown in the 1942-1960 photos. Some maintained fields and cleared areas are shown to the north in the 1942 and 1947 photos.

Based on the review of aerial photographs, the subject Property was a woodland dating back to at least the early 1940s. The surrounding area was woodlands with some rural agricultural lands until the late 1940's when the fields to the north reverted to woodlands. By the mid 1990's the central portion of the Property had been clear-cut, Farnan Road and the other trails had been constructed, and suburban residences are present to the southwest. By the mid 2000's, the Hexion industrial site and the Town of Moreau building were both constructed, the upper half of Farnan Road had been established as a paved road while the lower half of the road had become overgrown, and the Property and surrounding properties appear similar to present conditions.

No RECs were identified during the review of the aerial photographs of the subject Property.

4.1.5 Historical Topographic Maps

Historical topographic maps were reviewed for the years 1895, 1897, 1938, 1947, 1955, 1966, 2013, 2016, 2019, and 2023. The historical topographic maps are included in Appendix D. A summary of the historical topographic maps reviewed is provided below.

2023 2019 2016 2013	The interior topography of the Property is mostly even with steep slopes down to the southwest, southeast, and east. A stream in a gully flows southerly in the southwest section of the Property and is tributary to another stream which is tributary to the Hudson River. The overall elevation ranges from 285' to 120'. Farnan Road is shown as connecting to an unnamed road to the south on the 2013 map and ends at the north-central portion of the Property on the 2016-2023 maps. Power line Right-of-Ways and area buildings are not shown.
------------------------------	---

1966 1955	The topography of the Property is depicted similar to the conditions described for the 2013 to 2023 topography maps. Farnan Road is not shown. Power line Right-of-Ways are located to the west and the north. A track off the Delaware and Hudson Railroad is located just north of the Property.
1947 1938 1897 1895	The topography of the Property is depicted similar to the conditions described for the 1955 to 2023 topography maps. Farnan Road, power line Right-of-Ways, and the railroad track are not shown. The Hudson River has meandered into the southeastern section of the Property. An unimproved road and building are shown about 600' to the north of the Property.

No RECs were identified during the review of historical topographic maps.

4.1.6 Summary of Historical Data

Based on the review of county records, city directories, aerial photographs, and historical topography maps, the subject Property was a woodland dating back to at least the early 1940s. From the mid-1890s to at least the late 1940s the surrounding area was woodlands with some rural agricultural lands. By the late 1940s the fields to the north reverted to woodlands. By the mid-1990s, the central portion of the Property had been clear-cut, Farnan Road and the other trails had been constructed, and suburban residences are present to the southwest. By the mid-2000s, the Hexion industrial site and the Town of Moreau building were both constructed, the north part of Farnan Road had been established as a paved road while the south, unimproved part of the road had become overgrown, and the Property and surrounding properties appear similar to present conditions.

No RECs were identified in connection with the subject Property during the review of the historical data.

5.0 ENVIRONMENTAL REVIEW

5.1 Environmental Database Search

Hanson Van Vleet, PLLC reviewed environmental data compiled by EDR from the various bureaus of the State and the USEPA in order to determine the appropriate regulatory information available with regards to the environmental conditions of the Property and surrounding areas. Inquiries were made based on the ASTM Practice E1527-21 recommended radius of search. It should be noted that no regulatory environmental records exist prior to 1970, and limited environmental records exist prior to 1985. A summary of the regulatory information acquired during this evaluation is included below. A copy of the EDR Report is included as Appendix E.

A review of State and Federal environmental databases identified thirty-nine (39) listings of potential environmental concern within the ASTM search radius and in the study area. Ten (10) additional listings were non-geocoded by EDR due to inadequate address information. HVV reviewed the non-geocoded listings and determined eight (8) of them were outside the ASTM radius, distant, or downgradient from the subject Property, and were not considered to represent a

REC to the subject Property. The remaining two (2) non-geocoded listings pertain to the Niagara Mohawk Coal Tar Deposit which is discussed later in this section.

The subject Property was identified as a NY AIRS (Aerometric Information Retrieval System Data) site. The NY AIRS listing is related to permits obtained to construct and operate a wood pellet manufacturing plant on or near the subject Property which was never constructed. The NY AIRS listing does not represent a REC in connection with the subject Property.

A summary of the findings of the database search for surrounding sites is provided below.

The GE Hudson River PCB Remediation and Processing site was listed as a National Priorities List (NPL) site, Superfund Enterprise Management System (SEMS) site, a RCRA-LQG (Large Quantity Generator) site, a US Engineering Controls site, a US Institutional Controls site, a NY Spills site, a Record of Decision (ROD) site, a Principal Responsible Party (PRP) site, and a CONSENT (Orders on Consent) site. The closest edge of the Operable Unit of the Hudson River PCB site was identified as directly adjacent to the eastern boundary and downgradient of the subject Property. Based on the downgradient location, the database listings for the GE Hudson River PCB Remediation and Processing site are not considered to represent a REC to the subject Property.

An industrial site at 64 Farnan Road, located adjacent to the subject Property, was identified as Hexion Inc. on the NY Spills list, the RCRA-LQG (Large Quantity Generator) list, US AIRS, E MANIFEST (Electronic waste manifests) list, NY MANIFEST (hazardous waste manifests) list, NY CBS (Chemical Bulk Storage) list, NY CBS AST (Chemical Bulk Storage Above-ground Storage Tank list), and NY SPILLS list. The facility at 64 Farnan Road was also identified as Momentive Specialty Chemicals, Inc. on the PA MANIFEST and PFAS ECHO list. No open violations were noted among the database records for the US AIR MINOR, RCRA SQG (Small Quantity Generator), E MANIFESTS, MANIFESTS, CBS and CBS AST listings. The site is a chemical manufacturing facility utilizing various chemicals stored in several above ground storage tanks (ASTs) including formaldehyde, sodium hydroxide, and methanol. In 2022 roughly 8,500 gallons of formaldehyde leaked from a tank into a secondary containment from a malfunctioning seal. The company began air monitoring and diluting the formaldehyde with water before being pumped back into their process. The spill was closed later that year. On June 11, 2012, a spill of 10 gallons of “Therminol” heat transfer fluid at the Hexion facility was attributed to an equipment failure and a faulty tube was found and repaired. The spill affected an asphalt area and adjacent rocks which were promptly cleaned up, and the spill was closed by NYSDEC on June 14, 2012. On May 1, 2006, a spill involved a release of 55 to 150 gallons of heat transfer fluid as a result of a tube failure at the facility, then operated by Momentive Specialty Chemicals. The heat transfer fluid spilled on a large portion of the roof, back asphalt driveway, and associated grassy areas. The spill was remediated by absorbent material, cleaning, and excavation of affected soil areas. The NYSDEC closed the spill on August 31, 2007. Based on the closed status of the spill events, proper registration of chemical ASTs, federal registration for air quality monitoring, and RCRA registration with wastes transported under manifests, the chemical facility at 64 Farnan Road site is not considered to represent a REC to the subject Property.

The Niagara Mohawk Coal Tar Deposit (listed as a EDR Manufactured Gas Plant, a Solid Waste

Facility/Landfill, and an Inactive Landfill Initiative site) is a former coal tar deposit site located 2,463 feet north of the subject Property. In the early 1960's approximately 4,000 to 16,000 gallons of coal tar contaminated materials and drums of gas main sealant were disposed of at this site. Four (4) of the drums were found and removed in 1986. Subsequent investigation discovered a plume of contaminated groundwater. In 1991, approximately 15,000 tons of tar-contaminated soils were removed in 1991 and groundwater monitoring continued for a period of ten years which found the length and width of the plume and the level of contaminants were decreasing. Due to distance and plume size and decreasing levels of contaminants, this site is not considered to represent a REC to the subject Property.

The remaining database listings were for sites within their respective ASTM radii at locations greater than 2,500 feet and/or downgradient of the subject Property. The sites included the: GE Fort Edward site (listed as a CORRACTS (list of Federal RCRA facilities undergoing corrective action), RCRA-TSDF (Treatment Disposal Storage Facilities), RCRA-LQG, US & NY Engineering Controls, US & NY Institutional Controls, NY SHWS, NY LTANKS (records of leaking tanks), NY Spills, 2020 COR ACTION (RCRA Corrective Action program), PADS (Protected Areas Database), ICIS (Integrated Compliance Information System), US AIRS, E MANIFEST, and NY SPDES (NY State Pollutant Discharge and Elimination) site; Irving Tissue, Inc. (listed as a NY Hazardous Waste Site and a CBS AST site), Union Cemetery (listed as a NY SHWS site); Upper Broadway Barrel Site (listed as a NY SHWS site); the GE Moreau (former Caputo) site (listed as a NY SHWS and NY Vapor Reopened site); the Old Fort Edward Landfill site (listed as a NY SHWS, NY Engineering Controls, and a NY Institutional Controls site); the GE Hudson Falls Plant site (listed as a NY SHWS site); and the GE Hudson Falls site (listed as a SEMS-ARCHIVE, CORRACTS, RCRA-TSDF, RCRA-LQG, US Engineering Controls, PADS, and E MANIFEST site). Based on the extent of remedial actions taken at the sites, and the distant and/or downgradient locations, the environmental database listings for these sites greater than 2,500 feet away do not represent a REC to the subject Property.

No CERCLA, NFRAP, State BROWNFIELD, ERNS, VCP, or MOSF sites were identified within the respective ASTM search radius.

No RECs were identified in connection with the subject Property during the review of environmental database information.

5.2 Regulatory Agency File Review

The subject Property was identified in the environmental database search as a NY AIRS (Aerometric Information Retrieval System Data) site. The NY AIRS listing is related to permits obtained to construct and operate a wood pellet manufacturing plant on or near the subject Property which was never constructed. The NY AIRS listing does not represent a REC in connection with the subject Property. As such, no additional file reviews were warranted at the time of this assessment.

6.0 PHYSICAL SETTING

The topography of the surrounding area is relatively level and rises to the west and northwest and slopes downward sharply to the southwest and south, and to the east where the land meets the Hudson River. The subject Property is situated on a topographically lower area than that to the west and northwest and is topographically higher than lands to the south. The overall property relief is from 285' to 160' feet above mean sea level with elevations along the shore of the Hudson River about 120'. The interior portions of the Property gently slope to the south and east. An intermittent stream flows through the Property at the southwest and flows southerly through a gully and exits the Property to the southwest. Several smaller drainage channels start at the center of the Property and flow westerly into the intermittent stream. Several other drainage channels and intermittent streams start at the center-east portion of the Property and flow east into the Hudson River.

According to the Bedrock Geologic Map of New York-Hudson Mohawk Sheet, the bedrock underlying the Property has been identified as the Canajoharie Shale of the Loraine, Trenton, and Black River Groups (Middle Ordovician period). A bedrock exposure of black shale with calcite veins was observed at the east-central portion of the Property during the site visit. The bedrock was exposed along an intermittent stream and waterfall which flows east to the Hudson River.

According to the Surficial Geologic Map of New York-Hudson Mohawk Sheet, the surficial deposits underlying the Property are identified as lacustrine silt and clay, generally laminated silt and clay, deposited in proglacial lakes, with a thickness of up to 100 meters located on the upper elevations. The lower elevations of the Property to the east are recent deposits, generally confined to floodplains within a valley, oxidized, non-calcareous, fine sand to gravel, in larger valleys may be overlain by silt, subject to frequent flooding, with a thickness of 1-10 meters.

According to the EDR report, the soils at the Property consist of the Windsor Loamy Sand soils which are Class A, deep and well to excessively drained sands and gravels; Limerick Silt Loam soils which are Class C, poorly drained silt loam to loamy fine sand; Hudson Silt Loam, which are Class C moderately well drained silt loam to clay, and the Rhinebeck silt loam, which are Class D, clayey, and somewhat poorly drained silts and clays.

Based on the physical setting there do not appear to be any RECs to the subject Property.

7.0 INTERVIEWS

Attempts to reach representatives of the owners of the Property, Moreau Industrial Park, LLC, to interview them with respect to the environmental conditions on the Property, were unsuccessful as of this writing. The user of this report was sent an ASTM Questionnaire via email on 4/22/26, with a reminder sent on 6/3/26. The questionnaire was not returned as of this writing.

Mr. James Gironda, P.G, of HVV completed a questionnaire as the consultant on 6/16/26. Mr. Gironda was not aware of any environmental concerns or legal activity and use limitations (AULs) in connection with the Property. The ASTM Questionnaire answered by Mr. Gironda is provided in Appendix F.

On March 26, 2026, HVV placed a Freedom of Information Law (FOIL) request with the Town

of Moreau Town Clerk requesting Assessors cards; building permits; demolition permits; petroleum storage tank installation permits, removal records, and closure reports; deed restrictions; and activity and use limitations (AULs) on file for the subject Property. The Town Hall FOIL request documentation is included in Appendix G. On April 23, 2026, the Town Clerk returned records of assessor's cards for the nine parcels owned by Moreau Industrial Park at the Property, each indicating the parcels were vacant land with no known improvements. A deed inclusive of the nine parcels was also provided. No other records were returned in response to our FOIL request.

Due to the undeveloped or industrial nature of the adjacent properties, adjacent owners were not available for interviews.

8.0 FINDINGS

8.1 Polychlorinated Bi-phenyls (PCBs)

No transformers or other potential PCB containing equipment were observed at the Property.

8.2 Asbestos Containing Materials (ACM)

There are no structures or other known history of improvements on the Property. No evidence of suspected asbestos-containing materials was observed on the Property.

8.3 Petroleum Bulk Storage Tanks

No evidence of past or present petroleum bulk storage tanks was identified at the Property during the site reconnaissance and review of historical records.

8.4 Waste Water

The Property does not generate any waste water. Municipal sewer services are not available at the Property.

8.5 Hazardous Materials

No evidence of hazardous materials was identified at the Property.

8.6 Solid Waste

No solid waste is generated or stored on the Property.

8.7 Lead Based Paint (LBP)

There are no structures or other known history of improvements on the Property. No evidence of suspected lead-based paint was observed on the Property.

8.8 Storm Drains

Storm drains were observed along Farnan Road. No storm drains or storm water systems were observed on the Property.

8.9 Floor Drains

There are no structures or other improvements on the Property. No floor drains were present on

the Property.

8.10 Proximal Sites of Environmental Concern

Thirty-nine (39) listings of potential environmental concern were identified within the ASTM search radius. None of the listed sites are considered to represent recognized environmental conditions (RECs) to the subject Property.

8.11 Historical Concerns

HVV's review of historical information including topography maps and aerial photos indicated the Property was historically wooded lands from the late-1890's up to present day. No concerns related to historical land uses were identified in connection with the Property.

8.12 Environmental Concerns

Based on the review of the available environmental database information, historical records and site reconnaissance of the subject Property, no environmental concerns were identified.

8.13 Vapor Intrusion

No active upgradient or nearby sites were identified that could contribute to subsurface vapor intrusion at the Property.

9.0 OPINION

It is our opinion as Environmental Professionals, that the items identified during this assessment and summarized in this report are not considered to represent a recognized environmental condition (REC) at the Property.

10.0 DATA GAPS/DEVIATIONS

No significant data gaps or deviations have been identified at this time that has an impact on the ability of the environmental professional to fully evaluate the Property, with the exception of:

- Environmental liens, environmental deed restrictions and legal activity and use limitations (UALs) were not investigated. It is the "users" responsibility to search for and determine the applicability and significance of any recorded environmental liens, environmental deed restrictions and legal activity and use limitations (UALs).

An ASTM Questionnaire was not received from representatives of the owners of the Property or from the user as of the time of the writing of this report. The lack of a current ASTM Questionnaire from either party did not hinder our ability to render an opinion regarding the environmental condition of the Property, and is not considered to represent a significant data gap.

11.0 CONCLUSIONS

Hanson Van Vleet, PLLC has performed a Phase 1 Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E1527-21 of the Property, comprised of ten parcels with a total area of 72.0 acres, identified by the client as Moreau 2 and 3 in the Town of Moreau, Saratoga County, New York. Any exceptions to, or deletions from, this practice are described in

Section 11.0 of this report.

A *recognized environmental condition (REC)* refers to (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to release to the environment; under conditions indicative of a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment. The following RECs were identified during the course of this assessment:

- HVV did not identify any RECs in connection with the Property.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- HVV did not identify any CRECs in connection with the Property.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- HVV did not identify any HRECs in connection with the Property.

12.0 CERTIFICATION

Hanson Van Vleet, PLLC (HVV) certifies to Nexamp and Moreau Industrial Park, LLC, their employees, successors and/or assigns that the information contained within the referenced Phase 1 Environmental Site Assessment is accurate to the best of our knowledge. This report has been prepared employing reasonable investigative practices, including the review of accessible public records, interview, inspection of site features and facilities, and similar notable items as presumed necessary for the particular circumstances involved. HVV did not attempt to verify all data reviewed or received. The findings and conclusions contained herein must be considered not as scientific certainties, but as probabilities based on professional judgment concerning the significance of the limited data assimilated during the course of this evaluation.

HVV has performed a Phase 1 Environmental Site Assessment of the Property comprised of ten parcels with a total area of 72.0 acres, identified by the client as Moreau 2 and 3 in the Town of Moreau, Saratoga County, New York, in conformance with the scope and limitations of ASTM Practice E 1527-21. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no Recognized Environmental Conditions (RECs), no Controlled Recognized Environmental Conditions (CRECs), and no Historical Recognized Environmental Conditions (HRECs) in connection with the Property.

We declare to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312. We have specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/26/2025 has revealed that there are 2 NPL sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS Cerclis ID:: 202229 EPA Id: NYD980763841	NO STREET APPLICABLE	0 - 1/8 (0.000 mi.)	0	12
GE MOREAU Cerclis ID:: 201858 EPA Id: NYD980528335	FT EDWARD & WM ST	WSW 1/2 - 1 (0.597 mi.)	0	39

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS Site ID: 0202229 EPA Id: NYD980763841	NO STREET APPLICABLE	0 - 1/8 (0.000 mi.)	0	12

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

EXECUTIVE SUMMARY

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FORT EDWARDS PAPER M Site ID: 0201967 EPA Id: NYD980531909	UNKNOWN	SE 1/4 - 1/2 (0.467 mi.)	13	146

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GENERAL ELECTRIC-HUD	25 ALLEN ST	NE 1/2 - 1 (0.896 mi.)	C22	295

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
GE FORT EDWARD PLANT EPA ID:: NYR000155291	HUDSON & JULIET ST	ENE 1/8 - 1/4 (0.239 mi.)	B10	132

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 10/30/2025 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS EPA ID:: NYD980763841 EPA ID:: NYD980763841	NO STREET APPLICABLE	0 - 1/8 (0.000 mi.)	0	12

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/30/2025 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS EPA ID:: NYD980763841	NO STREET APPLICABLE	0 - 1/8 (0.000 mi.)	0	12

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 10/30/2025 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/09/2025 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NM COAL TAR DEPOSIT	240-260 BLUEBIRD RD	N 1/4 - 1/2 (0.466 mi.)	12	145

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/30/2025 has revealed that there is 1 NY LTANKS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Spill Number/Closed Date: 9106221 / 1994-01-20

Site ID: 296839

Spill Date: 1991-09-09

Lists of state and tribal registered storage tanks

NY CBS: These facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size

A review of the NY CBS list, as provided by EDR, and dated 12/05/2025 has revealed that there is 1 NY CBS site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HEXION, INC. Facility Status: Active CBS Number: 5-000150	64 FARNAN RD	NNE 0 - 1/8 (0.059 mi.)	A7	102

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 10/30/2025 has revealed that there are 2 NY Spills sites within approximately 0.125 miles of the target property.

GE MOREAU EPA ID:: NYD980528335	FT EDWARD & WM ST	WSW 1/2 - 1 (0.597 mi.)	0	39

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 09/30/2025 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	0 - 1/8 (0.000 mi.)	0	12

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/17/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

MOMENTIVE SPECIALTY Generator EPA Id: NYR000074187	64 FERNAN RD	NNE 0 - 1/8 (0.059 mi.)	A4	57

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2022 has revealed that

EXECUTIVE SUMMARY

there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

8500 gallons to secondary containment before the leak was found and stopped. Hexion began air monitoring and diluting the formaldehyde with water. Mixture was transferred to another holding tank to be pumped back into their process. Initial notification was made to the NRC 08/11/22: SP met with Hexion staff at the facility (Steve Duell and Jeff Hamilton). Advised that the seal that failed was the only one that was not upgraded to a different type. Requesting a copy of their CBS SPR, and 5 year inspection reports for all tank, piping and secondary containment. Will be revisiting the site in September for a formal CBS inspection after literature review. Also requesting their documentation as to cause and effect. RFC: No further action. Facility was formerly inspected - CBS NOV sent October 11, 2022.

Remarks:

cleanup done - steve paczko advised caller to report

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

on the site are a small evaporation lagoon and a drum disposal area. Liquid PCB wastes were dumped into the lagoon, previously an open sand pit. Soil in the drum disposal area, which holds about 100 drums, is contaminated. Numerous private drinking wells and the public wells for Fort Edwards are in the area. Due to chemical contamination, treatment units have been installed in private wells south of the site. Status July 1983): EPA is preparing a Remedial Action Master Plan outlining the investigations needed to determine the full extent of cleanup required at the site. It will guide further action at the site.

Environmental Interest/Information System:

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the

Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D004
Waste Description: Arsenic

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D018
Waste Description: Benzene

Waste Code: D019
Waste Description: Carbon Tetrachloride

Waste Code: D036
Waste Description: Nitrobenzene

Waste Code: D038
Waste Description: Pyridine

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichloroethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane,

Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F003

Waste Description:

The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F004

Waste Description:

The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F005

Waste Description:

The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

P012

Waste Description:

Arsenic Oxide As₂O₃ (Or) Arsenic Trioxide

Waste Code:

P030

Waste Description:

Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code:

U019

Waste Description:

Benzene (I,T)

Waste Code:

U080

Waste Description:

Methane, Dichloro- (Or) Methylene Chloride

Waste Code:

U122

Waste Description:

Formaldehyde

Waste Code:

U154

Waste Description:

Methanol (I) (Or) Methyl Alcohol (I)

Waste Code:

U169

Waste Description:

Benzene, Nitro- (Or) Nitrobenzene (I,T)

Spiller Address: 64 FARNAN ROAD
Spiller Company: 999
Contact Name: BARBARA KUCHARCCYK
Latitude: 43.2830132
Longitude: -73.6039910
DEC Memo: 05/01/06: AF contact B. Kucharccyk. They believe a tube failure in the shell/tube exchanger result in a pressure build up that resulted in blowing through the rupture discs on the system. Material was sprayed mostly across the roof and back parking lots - but some grassy areas were impacted. Speedy dry was being put down on the asphalt and they were assessing what additional assests they might need. AF site visit with Barb. Strong ambient odor across plant but dissipates quickly beyond the impact area. No nearby neighbors and no expectation that ambient condition could impact off-plant properties. Advised that they would need to also clean down the roof and had a significant soil excavation project. Staining did not directly overlay any storm drain inlets, nevertheless the plant storm drainage valve was shut off preventing any stormwater flow off the main palnt from migrating toward the discharge pond. They did not believe there had been any release that could have entered their wastewater pre-treatment system. Barb indicated they were working through their central office to enlist a local response contractor - Op-tech is expected to be the lead. Barb provided copies of the product MSDS on request. Tested PID as field screening method - useful to an extent, but not what meters are calibrated for. AF contacted Op-tech and advised that the PID might only have limited applicability for the response and that they should review the MSDS for PPE and potential respirator use at this site. 05/02/06: AF site inspection after first scrape out. Ambient condition lessened, but odor still present in the plant yard more excavation work required. 05/03/06: AF site inspection. Checked to confirm stormdrain lines were sealed in association with light rain event. No impacts at the pond, confirmed valve closed at further downline mainplan inlet structure. All Three inlet structures downline from the release contain a small quantity of water with light sheen. Will be collected and cleaned by Hexion. Excavation on-going, requiring larger area to stage soil. Post-ex sample analysis methodology being ironed out. 05/19/06: Initial actions report received from Hexion.

Approximately 40 yards of soil generated thus far. Interim conditions evaluated via soil sampling indicated significant impacts remained at shallow depths in the impacted areas. The Sotrmsewer line was cleaned and sampling was non-detect for that strucutre. Proposed Remedail action plan included. 05/23/06: Comments on proposed remedial plan from DOH. 05/31/06: Remedial plan comments sent to Hexion requiring modifications to the plan. 06/30/06: Revamped work plan received from Hexion. 08/02/06: Work plan approved with modifications, requires additional sampling prior to excavation. 12/1/06: Additional sampling and final excavation area report received with modified work scope. 01/10/07: Modification to the work scope received after discussions with Hexion and DOH. Hexion will excavate to pre-spill conditions. 01/12/07: Approval of work plan confirmed. 02/12/07: Excavation work undertaken. 07/26/07: Final report received. ~350 tons of soil excavated for disposal from the two areas. All post-ex samples in both areas were non-detect. Soil was transported for disposal at High Acres in Fairport, NY. 07/31/07: DOH confirmed they had no further concerns at the site. RFC = no further action required.

Remarks: HEAT TRANSFER FLUID- 55- 150 GALLONS: RUPTURED : ON LARGE PORTION IS ON ROOF AND ASPHALT DRIVEWAY: STILL INVESTIGATING AND CLEANING UP:

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	D027
Waste Description:	1,4-Dichlorobenzene
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	D038
Waste Description:	Pyridine
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	D040
Waste Description:	Trichloroethylene
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing:

Tetrachloroethylene, Trichloroethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F002

Waste Description:

The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F003

Waste Description:

The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F005

Waste Description:

The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F006

Waste Description:

Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code:

F007

Waste Description:

Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code:

F008

Waste Description:

Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code:

F009

Updated By: DATROMP

Site Description: Location: The GE Fort Edward site is a 32-acre site located in a suburban area, immediately west of Rt. 4 and immediately south of the Washington County Office Building. Site Features: The site is relatively flat with a gentle slope toward the south. Approximately 800 feet west of the former manufacturing area, there is a nearly vertical 80 foot drop to the Hudson River. The site includes building slabs, paved areas, a large wastewater treatment facility, and undeveloped land. The only building left at the site is the water treatment plant and associated annex. Current Zoning/Uses: The site is currently inactive and zoned for industrial use. The surrounding parcels are currently used for a combination of residential and commercial. Past Use of Site: Until 2016 the site was used for manufacturing capacitors. Prior manufacturing operations resulted in the release of PCBs, industrial solvents (including trichloroethene), and other compounds to the soils and dry wells at the site, and to the Hudson River. In 1976 the 1976 Settlement between DEC and GE was signed, under which GE was obligated to implement a PCB abatement program at the Fort Edward and Hudson Falls GE plant sites. In 1980 GE Fort Edward was listed on the Registry of Inactive Hazardous Waste Disposal Sites in New York. In 1982 contamination was discovered in private homeowner wells in the vicinity of the sites, leading to the start of the first RI/FS programs investigating the GE Fort Edward site as a source of the contamination. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately in investigation, eliminate or mitigate release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the overburden groundwater contaminant plume south of the site, which began in the late 1980s. OU2 consists of the groundwater and soil plumes on the plant site property, which began in the late 1980s. OU3 consists of the supplemental groundwater and oil recovery systems on the plant site property, which began in the early 2000's. OU4 consists of the PCB containing soils and sediments along the shore of the Hudson River in the vicinity of the former 004 wastewater outfall pipe, which was performed in the mid 2000's. OU5 consists of the PCB containing bedrock beneath the former 004 wastewater outfall pipe. OU6 consists of the subsurface area beneath the former building footprint and areas not otherwise addressed under other OUs. Site Geology and Hydrogeology: The shallow unconsolidated unit is hydraulically separated from the shallow bedrock unit by a low permeability till and clay-rich layer. The shallow unconsolidated unit typically consists of sand with minor amounts of gravel and overlies a low permeability silty clay (glacio-lacustrine) and till. The water table generally occurs in this unit under unconfined conditions and is free to rise and fall in response to groundwater recharge and discharge. The shallow bedrock unit consists of black, dense shale of the Snake Hill Formation which is underlain by limestone. Water levels fluctuate seasonally in the shallow unconsolidated unit. These fluctuations are variable across the facility and typically range from approximately 10 feet bgs to a low of approximately 0.5 foot bgs. As a result of pumping, groundwater flows in the shallow unconsolidated unit and shallow bedrock unit are toward the groundwater recovery system.

Env Problem: GE Fort Edward: Nature and Extent of Contamination: All classes of contaminants (i.e., VOCs, SVOCs, Metals and PCBs/Pesticides) were

analyzed for during the site characterization and remedial investigation. The contaminants of concern at this site are PCBs, chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene. Operable Unit 01 Groundwater - Chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene were found in the shallow aquifer. Significant impacts have occurred in the shallow aquifer beneath the site, which was used for human water consumption in the past and is currently unusable due to the presence of the VOCs above applicable standards. The 1989 ROD for this OU is an ongoing groundwater recovery and treatment program intended to mitigate the shallow groundwater contaminant plume in the overburden soils south of the site. Since implementation of the Operable Unit 1 remedial program, both the areal extent of the plume and the concentration of contaminants within the plume have been significantly reduced. Soil Vapor - Chlorinated Solvents In 2005, after two years of investigation, Sub-Slab Depressurization Systems (SSDSs) were installed in residences and businesses south of the site to prevent migration of contaminants into indoor air. SSDSs were and are still offered by the PRP to any residence that was over the groundwater contaminant plume. The PRP maintains these systems. Operable Unit 02/03 (the main portion of the site): Significant impacts of contaminants (PCB and VOCs) on the shallow aquifer beneath the site have occurred, which was used for human water consumption in the past and is currently unusable due to the presence of the PCBs and VOCs above applicable standards. The ROD for OU2 was issued in 1990, and the ROD for OU3 and OU4 was issued in 2000. The area is served by a public water system. Operable Unit 04 (the area of contaminated soils and sediment adjacent to the former 004 outfall on the eastern shore of the Hudson River): The primary concerns were the releases of PCBs to the Hudson River from the soils and sediments contaminated with PCBs along the Hudson River shoreline near the former 004 outfall. These releases of PCB from the site contributed to bioaccumulation of PCBs in fish. These releases have been abated by implementation and completion of the OU4 remedy by New York State (performed in 2003 and 2004). Operable Unit 05 (the area of bedrock beneath and in the vicinity of the former 004 outfall on the eastern shore of the Hudson River): Existing groundwater found after the OU4 remediation identified contamination (PCB and VOCs) in the bedrock aquifer beneath this portion of the site, which was usable for human water consumption in the past and is now unusable due to the presence of the PCB and VOCs above applicable standards. The area is served by a public water supply system. OU6: Building Demolition and Previously Inaccessible Areas: The buildings, with the exception of the water treatment plant, have been demolished. Building demolition began October 2019 and finished January 2021. An interim cover has been placed over the remaining building slabs. The Community Air Monitoring Program was implemented during the demolition activities. A sub-slab soil investigation began June 2021.

Health Problem:

People are not expected to be drinking contaminated water since public water which obtains its water from a different source was extended to affected structures. In addition, there is an on-going private well sampling and public water connection program to minimize potential exposures associated with consumption of contaminated groundwater and to encourage all residents to connect to public water. Direct contact with contaminants in the on-site soil or

groundwater is unlikely because the majority of the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater off-site unless they dig below the surface. People are not expected to come into contact with contaminated groundwater or sediment at seep locations since they are largely inaccessible due to the natural terrain and/or fenced. These areas are also posted. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in on-site buildings. Sub-slab depressurizations systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent the indoor air quality from being affected by the contaminant in soil vapor beneath buildings.

Date Record Added: 07/14/2004

Date Rec Updated: 12/30/2022

Updated By: DATROMP

Site Description: Location: The GE Fort Edward site is a 32-acre site located in a suburban area, immediately west of Rt. 4 and immediately south of the Washington County Office Building. Site Features: The site is relatively flat with a gentle slope toward the south. Approximately 800 feet west of the former manufacturing area, there is a nearly vertical 80 foot drop to the Hudson River. The site includes building slabs, paved areas, a large wastewater treatment facility, and undeveloped land. The only building left at the site is the water treatment plant and associated annex. Current Zoning/Uses: The site is currently inactive and zoned for industrial use. The surrounding parcels are currently used for a combination of residential and commercial. Past Use of Site: Until 2016 the site was used for manufacturing capacitors. Prior manufacturing operations resulted in the release of PCBs, industrial solvents (including trichloroethene), and other compounds to the soils and dry wells at the site, and to the Hudson River. In 1976 the 1976 Settlement between DEC and GE was signed, under which GE was obligated to implement a PCB abatement program at the Fort Edward and Hudson Falls GE plant sites. In 1980 GE Fort Edward was listed on the Registry of Inactive Hazardous Waste Disposal Sites in New York. In 1982 contamination was discovered in private homeowner wells in the vicinity of the sites, leading to the start of the first RI/FS programs investigating the GE Fort Edward site as a source of the contamination. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately in investigation, eliminate or mitigate release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the overburden groundwater contaminant plume south of the site, which began in the late 1980s. OU2 consists of the groundwater and soil plumes on the plant site property, which began in the late 1980s. OU3 consists of the supplemental groundwater and oil recovery systems on the plant site property, which began in the early 2000's. OU4 consists of the PCB containing soils and sediments along the shore of the Hudson River in the vicinity of the former 004 wastewater outfall pipe, which was performed in the mid 2000's. OU5 consists of the PCB containing bedrock beneath the former 004 wastewater outfall pipe. OU6 consists of the subsurface area beneath the former building footprint and areas not otherwise addressed under other OUs. Site Geology and Hydrogeology: The shallow unconsolidated unit is hydraulically separated from the shallow bedrock unit by a low permeability till and clay-rich layer. The shallow unconsolidated unit typically consists of sand with minor amounts of gravel and overlies a low permeability silty clay (glacio-lacustrine) and till. The water table generally occurs in this unit under unconfined conditions and is free to rise and fall in response to groundwater recharge and discharge. The shallow bedrock unit consists of black, dense shale of the Snake Hill Formation which is underlain by limestone. Water levels fluctuate seasonally in the shallow unconsolidated unit. These fluctuations are variable across the facility and typically range from approximately 10 feet bgs to a low of approximately 0.5 foot bgs. As a result of pumping, groundwater flows in the shallow unconsolidated unit and shallow bedrock unit are toward the groundwater recovery system.

Env Problem:

GE Fort Edward: Nature and Extent of Contamination: All classes of contaminants (i.e., VOCs, SVOCs, Metals and PCBs/Pesticides) were analyzed for during the site characterization and remedial investigation. The contaminants of concern at this site are PCBs, chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene. Operable Unit 01 Groundwater - Chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene were found in the shallow aquifer. Significant impacts have occurred in the shallow aquifer beneath the site, which was used for human water consumption in the past and is currently unusable due to the presence of the VOCs above applicable standards. The 1989 ROD for this OU is an ongoing groundwater recovery and treatment program intended to mitigate the shallow groundwater contaminant plume in the overburden soils south of the site. Since implementation of the Operable Unit 1 remedial program, both the areal extent of the plume and the concentration of contaminants within the plume have been significantly reduced. Soil Vapor - Chlorinated Solvents In 2005, after two years of investigation, Sub-Slab Depressurization Systems (SSDSs) were installed in residences and businesses south of the site to prevent migration of contaminants into indoor air. SSDSs were and are still offered by the PRP to any residence that was over the groundwater contaminant plume. The PRP maintains these systems. Operable Unit 02/03 (the main portion of the site): Significant impacts of contaminants (PCB and VOCs) on the shallow aquifer beneath the site have occurred, which was used for human water consumption in the past and is currently unusable due to the presence of the PCBs and VOCs above applicable standards. The ROD for OU2 was issued in 1990, and the ROD for OU3 and OU4 was issued in 2000. The area is served by a public water system. Operable Unit 04 (the area of contaminated soils and sediment adjacent to the former 004 outfall on the eastern shore of the Hudson River): The primary concerns were the releases of PCBs to the Hudson River from the soils and sediments contaminated with PCBs along the Hudson River shoreline near the former 004 outfall. These releases of PCB from the site contributed to bioaccumulation of PCBs in fish. These releases have been abated by implementation and completion of the OU4 remedy by New York State (performed in 2003 and 2004). Operable Unit 05 (the area of bedrock beneath and in the vicinity of the former 004 outfall on the eastern shore of the Hudson River): Existing groundwater found after the OU4 remediation identified contamination (PCB and VOCs) in the bedrock aquifer beneath this portion of the site, which was usable for human water consumption in the past and is now unusable due to the presence of the PCB and VOCs above applicable standards. The area is served by a public water supply system. OU6: Building Demolition and Previously Inaccessible Areas: The buildings, with the exception of the water treatment plant, have been demolished. Building demolition began October 2019 and finished January 2021. An interim cover has been placed over the remaining building slabs. The Community Air Monitoring Program was implemented during the demolition activities. A sub-slab soil investigation began June 2021.

Health Problem:

People are not expected to be drinking contaminated water since public water which obtains its water from a different source was extended to affected structures. In addition, there is an on-going private well sampling and public water connection program to minimize potential exposures associated with consumption of contaminated

groundwater and to encourage all residents to connect to public water. Direct contact with contaminants in the on-site soil or groundwater is unlikely because the majority of the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater off-site unless they dig below the surface. People are not expected to come into contact with contaminated groundwater or sediment at seep locations since they are largely inaccessible due to the natural terrain and/or fenced. These areas are also posted. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in on-site buildings. Sub-slab depressurizations systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent the indoor air quality from being affected by the contaminant in soil vapor beneath buildings.

Operable Unit 05 (the area of bedrock beneath and in the vicinity of the former 004 outfall on the eastern shore of the Hudson River): Existing groundwater found after the OU4 remediation identified contamination (PCB and VOCs) in the bedrock aquifer beneath this portion of the site, which was usable for human water consumption in the past and is now unusable due to the presence of the PCB and VOCs above applicable standards. The area is served by a public water supply system. OU6: Building Demolition and Previously Inaccessible Areas: The buildings, with the exception of the water treatment plant, have been demolished. Building demolition began October 2019 and finished January 2021. An interim cover has been placed over the remaining building slabs. The Community Air Monitoring Program was implemented during the demolition activities. A sub-slab soil investigation began June 2021.

Health Problem: People are not expected to be drinking contaminated water since public water which obtains its water from a different source was extended to affected structures. In addition, there is an on-going

private well sampling and public water connection program to minimize potential exposures associated with consumption of contaminated groundwater and to encourage all residents to connect to public water. Direct contact with contaminants in the on-site soil or groundwater is unlikely because the majority of the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater off-site unless they dig below the surface. People are not expected to come into contact with contaminated groundwater or sediment at seep locations since they are largely inaccessible due to the natural terrain and/or fenced. These areas are also posted. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in on-site buildings. Sub-slab depressurizations systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent the indoor air quality from being affected by the contaminant in soil vapor beneath buildings.

Site Description:

Location: The GE Fort Edward site is a 32-acre site located in a suburban area, immediately west of Rt. 4 and immediately south of the Washington County Office Building. Site Features: The site is relatively flat with a gentle slope toward the south. Approximately 800 feet west of the former manufacturing area, there is a nearly vertical 80 foot drop to the Hudson River. The site includes building slabs, paved areas, a large wastewater treatment facility, and undeveloped land. The only building left at the site is the water treatment plant and associated annex. Current Zoning/Uses: The site is currently inactive and zoned for industrial use. The surrounding parcels are currently used for a combination of residential and commercial. Past Use of Site: Until 2016 the site was used for manufacturing capacitors. Prior manufacturing operations resulted in the release of PCBs, industrial solvents (including trichloroethene), and other compounds to the soils and dry wells at the site, and to the Hudson River. In 1976 the 1976 Settlement between DEC and GE was signed, under which GE was obligated to implement a PCB abatement program at the Fort Edward and Hudson Falls GE plant sites. In 1980 GE Fort Edward was listed on the Registry of Inactive Hazardous Waste Disposal Sites in New York. In 1982 contamination was discovered in private homeowner wells in the vicinity of the sites, leading to the start of the first RI/FS programs investigating the GE Fort Edward site as a source of the contamination. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately in investigation, eliminate or mitigate release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the overburden groundwater contaminant plume south of the site, which began in the late 1980s. OU2 consists of the groundwater and soil plumes on the plant site property, which began in the late 1980s. OU3 consists of the supplemental groundwater and oil recovery systems on the plant site property, which began in the early 2000's. OU4 consists of the PCB containing soils and sediments along the shore of the Hudson River in the vicinity of the former 004 wastewater outfall pipe, which was performed in the mid 2000's. OU5 consists of the PCB containing bedrock beneath the former 004 wastewater outfall pipe. OU6 consists of the subsurface area beneath the former building footprint and areas not otherwise addressed under other OUs. Site Geology and Hydrogeology: The shallow unconsolidated unit is hydraulically separated from the shallow bedrock unit by a low permeability till and clay-rich layer. The shallow unconsolidated unit typically consists of sand with minor amounts of gravel and overlies a low permeability silty clay (glacio-lacustrine) and till. The water table generally occurs in this unit under unconfined conditions and is free to rise and fall in response to groundwater recharge and discharge. The shallow bedrock unit consists of black, dense shale of the Snake Hill Formation which is underlain by limestone. Water levels fluctuate seasonally in the shallow unconsolidated unit. These fluctuations are variable across the

Env Problem:

facility and typically range from approximately 10 feet bgs to a low of approximately 0.5 foot bgs. As a result of pumping, groundwater flows in the shallow unconsolidated unit and shallow bedrock unit are toward the groundwater recovery system.

GE Fort Edward: Nature and Extent of Contamination: All classes of contaminants (i.e., VOCs, SVOCs, Metals and PCBs/Pesticides) were analyzed for during the site characterization and remedial investigation. The contaminants of concern at this site are PCBs, chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene.

Operable Unit 01 Groundwater - Chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene were found in the shallow aquifer. Significant impacts have occurred in the shallow aquifer beneath the site, which was used for human water consumption in the past and is currently unusable due to the presence of the VOCs above applicable standards. The 1989 ROD for this OU is an ongoing groundwater recovery and treatment program intended to mitigate the shallow groundwater contaminant plume in the overburden soils south of the site. Since implementation of the Operable Unit 1 remedial program, both the areal extent of the plume and the concentration of contaminants within the plume have been significantly reduced. Soil Vapor - Chlorinated Solvents In 2005, after two years of investigation, Sub-Slab Depressurization Systems (SSDSs) were installed in residences and businesses south of the site to prevent migration of contaminants into indoor air. SSDSs were and are still offered by the PRP to any residence that was over the groundwater contaminant plume. The PRP maintains these systems. Operable Unit 02/03 (the main portion of the site): Significant impacts of contaminants (PCB and VOCs) on the shallow aquifer beneath the site have occurred, which was used for human water consumption in the past and is currently unusable due to the presence of the PCBs and VOCs above applicable standards. The ROD for OU2 was issued in 1990, and the ROD for OU3 and OU4 was issued in 2000. The area is served by a public water system. Operable Unit 04 (the area of contaminated soils and sediment adjacent to the former 004 outfall on the eastern shore of the Hudson River): The primary concerns were the releases of PCBs to the Hudson River from the soils and sediments contaminated with PCBs along the Hudson River shoreline near the former 004 outfall. These releases of PCB from the site contributed to bioaccumulation of PCBs in fish. These releases have been abated by implementation and completion of the OU4 remedy by New York State (performed in 2003 and 2004). Operable Unit 05 (the area of bedrock beneath and in the vicinity of the former 004 outfall on the eastern shore of the Hudson River): Existing groundwater found after the OU4 remediation identified contamination (PCB and VOCs) in the bedrock aquifer beneath this portion of the site, which was usable for human water consumption in the past and is now unusable due to the presence of the PCB and VOCs above applicable standards. The area is served by a public water supply system. OU6: Building Demolition and Previously Inaccessible Areas: The buildings, with the exception of the water treatment plant, have been demolished. Building demolition began October 2019 and finished January 2021. An interim cover has been placed over the remaining building slabs. The Community Air Monitoring Program was implemented during the demolition activities. A sub-slab soil investigation began June 2021.

People are not expected to come into contact with contaminated groundwater or sediment at seep locations since they are largely inaccessible due to the natural terrain and/or fenced. These areas are also posted. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in on-site buildings. Sub-slab depressurizations systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent the indoor air quality from being affected by the contaminant in soil vapor beneath buildings.

Name: G.E. FORT EDWARD PLANT SITE
Address: 381 UPPER BROADWAY
City,State,Zip: FORT EDWARD, NY 12828
Site Code: 56213
Control Name: Deed Restriction
HW Code: 558004
Control Code: A
Control Type: INST
Dt record added: 07/14/2004
Dt rec updated: 12/30/2022
Updated By: DATROMP
Site Code: 56213

Site Description: Location: The GE Fort Edward site is a 32-acre site located in a suburban area, immediately west of Rt. 4 and immediately south of the Washington County Office Building. Site Features: The site is relatively flat with a gentle slope toward the south. Approximately 800 feet west of the former manufacturing area, there is a nearly vertical 80 foot drop to the Hudson River. The site includes building slabs, paved areas, a large wastewater treatment facility, and undeveloped land. The only building left at the site is the water treatment plant and associated annex. Current Zoning/Uses: The site is currently inactive and zoned for industrial use. The surrounding parcels are currently used for a combination of residential and commercial. Past Use of Site: Until 2016 the site was used for manufacturing capacitors. Prior manufacturing operations resulted in the release of PCBs, industrial solvents (including trichloroethene), and other compounds to the soils and dry wells at the site, and to the Hudson River. In 1976 the 1976 Settlement between DEC and GE was signed, under which GE was obligated to implement a PCB abatement program at the Fort Edward and Hudson Falls GE plant sites. In 1980 GE Fort Edward was listed on the Registry of Inactive Hazardous Waste Disposal Sites in New York. In 1982 contamination was discovered in private homeowner wells in the vicinity of the sites, leading to the start of the first RI/FS programs investigating the GE Fort Edward site as a source of the contamination. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately in investigation, eliminate or mitigate release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the overburden groundwater contaminant plume south of the site, which began in the late 1980s. OU2 consists of the groundwater and soil plumes on the plant site property, which began in the late 1980s. OU3 consists of the supplemental groundwater and oil recovery systems on the plant site property, which began in the early 2000's. OU4 consists of the PCB containing soils and sediments along the shore of the Hudson River in the vicinity of the former 004 wastewater outfall pipe, which was performed in the mid 2000's. OU5 consists of the PCB containing bedrock beneath the former 004 wastewater outfall pipe. OU6 consists of the subsurface area beneath the former building footprint and areas not otherwise addressed under other OUs. Site Geology and Hydrogeology: The shallow unconsolidated

Env Problem:

unit is hydraulically separated from the shallow bedrock unit by a low permeability till and clay-rich layer. The shallow unconsolidated unit typically consists of sand with minor amounts of gravel and overlies a low permeability silty clay (glacio-lacustrine) and till. The water table generally occurs in this unit under unconfined conditions and is free to rise and fall in response to groundwater recharge and discharge. The shallow bedrock unit consists of black, dense shale of the Snake Hill Formation which is underlain by limestone. Water levels fluctuate seasonally in the shallow unconsolidated unit. These fluctuations are variable across the facility and typically range from approximately 10 feet bgs to a low of approximately 0.5 foot bgs. As a result of pumping, groundwater flows in the shallow unconsolidated unit and shallow bedrock unit are toward the groundwater recovery system.

GE Fort Edward: Nature and Extent of Contamination: All classes of contaminants (i.e., VOCs, SVOCs, Metals and PCBs/Pesticides) were analyzed for during the site characterization and remedial investigation. The contaminants of concern at this site are PCBs, chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene.

Operable Unit 01 Groundwater - Chlorinated solvents (trichloroethylene trans-1,2-dichloroethane, vinyl chloride), chlorinated benzenes, phthalates, and toluene were found in the shallow aquifer. Significant impacts have occurred in the shallow aquifer beneath the site, which was used for human water consumption in the past and is currently unusable due to the presence of the VOCs above applicable standards. The 1989 ROD for this OU is an ongoing groundwater recovery and treatment program intended to mitigate the shallow groundwater contaminant plume in the overburden soils south of the site. Since implementation of the Operable Unit 1 remedial program, both the areal extent of the plume and the concentration of contaminants within the plume have been significantly reduced. Soil Vapor - Chlorinated Solvents In 2005, after two years of investigation, Sub-Slab Depressurization Systems (SSDSs) were installed in residences and businesses south of the site to prevent migration of contaminants into indoor air. SSDSs were and are still offered by the PRP to any residence that was over the groundwater contaminant plume. The PRP maintains these systems. Operable Unit 02/03 (the main portion of the site): Significant impacts of contaminants (PCB and VOCs) on the shallow aquifer beneath the site have occurred, which was used for human water consumption in the past and is currently unusable due to the presence of the PCBs and VOCs above applicable standards. The ROD for OU2 was issued in 1990, and the ROD for OU3 and OU4 was issued in 2000. The area is served by a public water system. Operable Unit 04 (the area of contaminated soils and sediment adjacent to the former 004 outfall on the eastern shore of the Hudson River): The primary concerns were the releases of PCBs to the Hudson River from the soils and sediments contaminated with PCBs along the Hudson River shoreline near the former 004 outfall. These releases of PCB from the site contributed to bioaccumulation of PCBs in fish. These releases have been abated by implementation and completion of the OU4 remedy by New York State (performed in 2003 and 2004). Operable Unit 05 (the area of bedrock beneath and in the vicinity of the former 004 outfall on the eastern shore of the Hudson River): Existing groundwater found after the OU4 remediation identified contamination (PCB and VOCs) in the bedrock aquifer beneath this portion of the site, which was usable for human water

1000212485

consumption in the past and is now unusable due to the presence of the PCB and VOCs above applicable standards. The area is served by a public water supply system. OU6: Building Demolition and Previously Inaccessible Areas: The buildings, with the exception of the water treatment plant, have been demolished. Building demolition began October 2019 and finished January 2021. An interim cover has been placed over the remaining building slabs. The Community Air Monitoring Program was implemented during the demolition activities. A sub-slab soil investigation began June 2021.

Health Problem: People are not expected to be drinking contaminated water since public water which obtains its water from a different source was extended to affected structures. In addition, there is an on-going private well sampling and public water connection program to minimize potential exposures associated with consumption of contaminated groundwater and to encourage all residents to connect to public water. Direct contact with contaminants in the on-site soil or groundwater is unlikely because the majority of the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater off-site unless they dig below the surface. People are not expected to come into contact with contaminated groundwater or sediment at seep locations since they are largely inaccessible due to the natural terrain and/or fenced. These areas are also posted. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in on-site buildings. Sub-slab depressurizations systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent the indoor air quality from being affected by the contaminant in soil vapor beneath buildings.

Record Upd: 03/19/2024
Updated By: BDHUYCK

Site Description: Location: The Irving Tissue "forebay" site is located in a suburban portion of Washington County, NY. The facility is at 1 Eddy Street immediately off State Route 4 in Fort Edward. Site Features: The main site features are several large buildings, both administrative and manufacturing, and support infrastructure for the tissue paper making process. The property is adjacent to the Hudson River. The site is bounded by the Hudson River on the south, a PCB remnant site on the west, a rail spur and line to the north and Route 4 and a mixed commercial/residential area to the east. Current Zoning and Land Use: The site is an active tissue manufacturing operation and the area has been in continuous industrial use throughout the 1900's. Past Use of the Site: The area of concern, the forebay area, was the location of a historical diversion of Hudson River water into an embayment that funnelled the water through power generating turbines. During that time river sediments containing PCBs collected there until 1973 when the area was backfilled and the associated empoundment (dam) was removed. The area is currently a paved parking lot. As part of a major facility expansion, Irving Tissue initiated an environmental assessment of media in the area of the planned expansion. During the investigation PCB contamination of subsurface soils was discovered. The studies continued through 2009 and early 2010. A Site Management Plan was submitted to the Department in August 2010.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site are PCBs. Investigations indicate that the PCBs have impacted subsurface soil and groundwater. The main impact is in the forebay area where PCB contaminated sediments accumulated during the operation of the power plant turbines. Later debris from the decommissioned dam was used as fill in this area. Groundwater studies have shown that the impact to groundwater is limited to the source area. This area is "walled off" on at least two sides due to plant structures that are built to and into bedrock.

Classification: N
Region: 5
Acres: 35.400
HW Code: 558040
Record Add: 04/28/2010
Record Upd: 01/31/2011
Updated By: BRWOLOSE

Site Description: The site is a cemetery located in a mix residential and commercial area. A maintenance and office building is located on the site. It is suspected that site contamination was a result of oils spread to control dust along the cemetery roads. The site is bound by Broadway to the west, Schuyler Street to the north, Burgoyne Avenue to the east, and Gates Avenue to the south. A 3 ft high fence is located along the property boundary. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites

Env Problem: A surficial soil sample was collected in November 1984, which detected aroclor 1016/1242 polychlorinated biphenyls (PCBs) at 26,000 parts per million (ppm) in the soil. Twelve soil samples were collected in December 1984, which detected total PCBs ranging from 0.07 to 3.5 ppm. Three aroclors 1016/1242, 1248, and 1254 were detected. Twelve samples were collected in August 23, 2010, which detected total PCBs ranging from 0.026 to 3.1 parts per million (ppm). Intervals sampled were from 0 inches below ground surface to a maximum of 12 inches below ground surface and biased towards dark gray soils when present. A comparison of the August sample results to 6 NYCRR Part 375 soil cleanup objectives indicates that four samples, identified as S1R, S5R, S5W, and S6G, were above unrestricted use criteria (0.1 ppm) and one sample, identified as S1R, was above residential/commercial use criteria (1 ppm). Detections of PCBs were below the impact to groundwater cleanup objective (3.2 ppm). Sample S1R was located in the vicinity of the elevated November 1984 sample and resulted in a detection of 3.1 ppm of aroclor 1248. Aroclor 1016/1242 was not detected in August 2010 and detected up to 1 ppm in December 1984.

Acres: 5.900
HW Code: 558033
Record Add: 08/02/2002
Record Upd: 04/27/2021
Updated By: JEBROWN

Site Description: Location: This property is located at 354 Broadway in the Town of Ft. Edward. The site transitioned from State Superfund to a Brownfield project as the Former Grand Union site, C558033. Site Features: The site is relatively flat. The former Grand Union building is located behind two fast food restaurants on Broadway and adjacent to the Agway. The building has been empty for some time and has fallen into disrepair. There was a fire inside the building and the roof has been breached. Current Zoning: Commercial Historical Uses: The site was the location of a former Grand Union food store and a car dealership/repair shop prior to that. Due to concerns from local residents that hazardous waste may have been disposed of on the property, a state funded site characterization was completed in the Fall, 2004. PCBs were detected in the shallow subsurface soils at low concentrations. The owner took actions to remove all soils contaminated with PCBs greater than 1 ppm. This activity continued into 2006 and although approximately 3,500 tons of contaminated soils has been removed, additional remediation is needed. Confirmation sampling found PCBs greater than 1 ppm. The USEPA conducted an extensive investigation of the site in 2011 which has characterized the remaining PCB contamination. The Town of Fort Edward has obtained

UPPER BROADWAY BARREL SITE (Continued)

S121933907

a USEPA Brownfield grant to address the a portion of the remaining soil contamination. The Town of Fort Edward also successfully applied for a Brownfield Cleanup Agreement with the NYSDEC. The site transitioned from State Superfund to a Brownfield project as the Former Grand Union site, C558033. The contaminated soil present at the site was addressed under the Brownfield Cleanup. The details of the remediation may be found under site number C558033. Site Geology and Hydrogeology: The overburden is varies from 20 to 60 feet thick and is comprised primarily of sand. Groundwater was encountered between 6 to 9 feet below the ground surface in the overburden and flows in a south to southwest direction.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polychlorinated biphenyls (PCBs) in soil. PCBs were found in the soil. 3500 tons of contaminated soil were removed, but areas of PCB contamination remained. No impacts to groundwater or soil vapor detected. Remediation of this project was completed under the governance of the Brownfield Cleanup Program site ID number C558033. The PCB contaminated soil was removed from the property to achieve the remedial clean up goal of 1 ppm in the 0 to 1 foot depth and 10 ppm at deeper depths. There was a small area of SVOC contamination in the southeast corner of the property. This soil was also remediated during the Brownfield cleanup. The Cleanup was completed the project has achieved the site cleanup goals, and a Certificate of Completion was issued in December of 2015.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By: BDHUYCK

Site Description: Location: The G.E. - Moreau (formerly Caputo) site is located in a suburban area. The site is approximately 0.2 miles northwest of the intersection of Bluebird Road (Route 27) and Fort Edward Road (Route 28). The site is bounded to the north by undeveloped land and residential properties, to the east by Bluebird Road and residential dwellings, to the south by a utility right-of-way, and to the west by vacant land. Site Features: The site includes a closed, capped landfill and a building that houses the groundwater treatment system. Current Zoning and Land Use: The site is currently inactive. The surrounding parcels are a combination of vacant, residential use, and utility right-of-ways. Past Use of the Site: From 1958 to 1968, industrial waste was disposed of at the site. Prior uses that appear to have led to site contamination include the disposal of waste material, including trichloroethene (TCE), polychlorinated biphenyls (PCBs), spent solvents, oil, sludge, and other wastes in an on-site evaporation pit, disposal of drummed waste materials, and the use of PCB-contaminated oil as a dust suppressant on the dirt roads on the site. The New York State Department of Environmental Conservation (DEC) was informed of the disposal of PCBs at the site in 1975 and conducted an investigation of the site between 1977 and 1979. The Town of Moreau initiated remedial actions at the site in 1978. These actions included the removal of contaminated soil and disposal of drums containing waste materials. In 1979, the Town of Moreau and the New York State Department of Transportation (DOT) conducted additional remedial work at the site, including the cover and seeding of the evaporation pit, drum disposal area, and adjacent areas. The Seven Sites Agreement was executed in 1980. Site Geology and Hydrogeology: Site soils consist of fine to coarse sand with traces of fine gravel, underlain by silt interbedded with thin lenses of fine sand and clay. Beneath this lies a layer of silt and clay. Groundwater is present at approximately 30 feet below ground surface and flows predominantly to the south and southeast.

Env Problem: Remediation at this site is protective. This site is a closed landfill. The primary contaminants of concern are polychlorinated biphenyls (PCBs) and volatile organic compounds (VOCs) in soil and groundwater and VOCs in surface water. Remedial actions are preventing contaminant migration from the waste mass into the environment. Residual contamination in the groundwater and surface water is being managed under a Site Management Plan.

Health Problem: The site is remediated and access is restricted. Semi-annual

Site Description: Location: The Old Ft. Edward Landfill Site is located in a suburban area. The site is approximately 0.23 miles east of the intersection of Burgoyne Avenue (County Route 37) and McIntyre Street. The site is bounded to the north and south by undeveloped land, to the east by Towpath Lane, and to the west by residential properties. Site Features: The site consists of a closed landfill which includes a vegetative cover. The site includes one building that houses the groundwater treatment system. Current Zoning: The site is currently inactive. The surrounding parcels are a combination of residential and commercial use. Past Use of the Site: From approximately 1940 to 1952 the site was used as an open landfill that received both municipal and industrial wastes. Prior uses that appear to have led to site contamination include the disposal of capacitors containing polychlorinated biphenyls (PCBs). Site Geology and Hydrogeology: Site soils consist of topsoil, underlain by fine to coarse sand with traces of silt and gravel. Beneath this lies a layer of silt and clay. Groundwater is present at approximately 10 feet below ground surface and flows to the southeast.
Env Problem: Remediation at the site is protective. This site is a closed landfill. Residual contamination is being addressed through active treatment. The primary contaminants of concern are polychlorinated biphenyls (PCBs) in soil and groundwater. Remedial actions are preventing contaminant migration from the waste mass into the environment. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem: Monitoring of the site will continue to insure the effectiveness and

Site Code: 56211

Site Description: Location: The Old Ft. Edward Landfill Site is located in a suburban area. The site is approximately 0.23 miles east of the intersection of Burgoyne Avenue (County Route 37) and McIntyre Street. The site is bounded to the north and south by undeveloped land, to the east by Towpath Lane, and to the west by residential properties. Site Features: The site consists of a closed landfill which includes a vegetative cover. The site includes one building that houses the groundwater treatment system. Current Zoning: The site is currently inactive. The surrounding parcels are a combination of residential and commercial use. Past Use of the Site: From approximately 1940 to 1952 the site was used as an open landfill that received both municipal and industrial wastes. Prior uses that appear to have led to site contamination include the disposal of capacitors containing polychlorinated biphenyls (PCBs). Site Geology and Hydrogeology: Site soils consist of topsoil, underlain by fine to coarse sand with traces of silt and gravel. Beneath this lies a layer of silt and clay. Groundwater is present at approximately 10 feet below ground surface and flows to the southeast.

Env Problem: Remediation at the site is protective. This site is a closed landfill. Residual contamination is being addressed through active treatment. The primary contaminants of concern are polychlorinated biphenyls (PCBs) in soil and groundwater. Remedial actions are preventing contaminant migration from the waste mass into the environment. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Monitoring of the site will continue to insure the effectiveness and integrity of the cap. There are no current exposure concerns.

Dump: True

Address: JOHN STREET
City,State,Zip: HUDSON FALLS, NY 12839
Program: HW
Site Code: 56219
Classification: Significant threat to the public health or environment - action required.
Region: 5
Acres: 25.000
HW Code: 558013
Record Add: 11/18/1999
Record Upd: 04/22/2025
Updated By: JALACLA
Site Description: Location: The General Electric Hudson Falls Plant Site is a 14-acre site located in a suburban area. Site Features: The site is relatively flat and includes the Wastewater Treatment Plant and entrance for the Tunnel Drain Collection System (TDCS). The portion of the site near the WWTP is surrounded by paved parking spots and a gravel-covered area surrounding the TDCS entrance. The area in the southeast portion of the site, south of Allen St., is covered with pavement and crushed stone. The remaining portions of the site have a final cover that consists of a demarcation layer and either a foot of clean soil or crushed stone. Past Use of the Site: The GE HF site manufactured electrical capacitors and filled these capacitors with oil containing PCBs from 1952 until 1977 when PCBs were banned. The facility closed operations in 1995. The site has undergone extensive cleanup conducted under the State Superfund authority. PCBs and other chemicals are no longer discharging to the Hudson River from this Superfund site. Several large former manufacturing buildings were demolished, a large soil excavation project was completed, and the

G.E. HUDSON FALLS PLANT SITE (Continued)

1005650306

site has been regraded. The site cleanup actions were completed Fall 2020 and resulted in a site that is protective of human health and the environment. Site Management will continue, including maintenance of a soil cover, operation of a groundwater extraction and treatment system and operation of the TDCS. Operable Units: The site was divided into 4 operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 2A (OU2A) consists of the soils and contamination that may be found at and in the vicinity of the site above the Snake Hill Shale Formation. OU2B consists of the groundwater and contamination that may be found at or in the vicinity of the site above the Snake Hill Shale, not including the soils. OU2C is defined as contamination and pathways of contaminant migration in the bedrock at or near the site, within the Snake Hill Formation above the elevation of the base of the plunge pool located beneath Baker s Falls. OU2D is defined as contamination and pathways of contamination migration in the bedrock at or near the site, below OU2C. Site Geology and Hydrogeology: The stratigraphic units that have been identified beneath the Site are the overburden, the Snake Hill Shale, the Glens Falls Limestone, and the Isle La Motte Limestone. Beneath the Site, the overburden, which consists of fill, sand, clay and till ranges in thickness from two to 21 feet. The Snake Hill Shale, which is the uppermost bedrock formation, ranges in thickness from 150 to 250 feet. The Glens Falls Limestone and Isle La Motte Limestone are approximately 100 and 60 feet thick, respectively. Prior to the installation and pumping from the site extraction wells, groundwater flow beneath the Site was generally southwesterly toward the Hudson River. The groundwater extraction wells and the Tunnel Drain Collection System have created localized hydraulic capture zones. As of April 24, 2023, demolition of the Power House is substantially complete and discussions will begin in regards to Allen Mill.

Env Problem:

Nature and Extent of Contamination: Post-Remediation Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are PCBs, VOCs and SVOCs in the soil, PCBs in groundwater, PCBs in surface water and PCBs in sediments. Remedial actions have successfully achieved soil cleanup objectives for industrial/commercial use. Residual contamination in the soil, groundwater and sediment is being managed under a Site Management Plan. Prior to Completion of Remediation For OU2A: Overburden Soils Concentrations of PCBs in soil were found at levels up to 250,000 ppm. High concentrations of PCBs are indicative of the presences of PCBS as a NAPL. Concentrations of SVOCs and VOCs were found up to 344 ppm and 370 ppm, respectively. Overburden Groundwater Groundwater in the vicinity of Buildings 1 and 1A is the most severely impacted and are saturated with contaminant due to the presence of PCBS, VOCs, and SVOCS within the soils at high concentrations. For OU2B-D: Bedrock Groundwater The primary mechanism of release to the bedrock beneath the site was the migration of contaminants directly into the bedrock from beneath Building 1 through the return air duct and associated structures. The Upper Snake Hill Shale is contaminated in the immediate vicinity of the manufacturing buildings and in the vicinity of the Upper Raceway and contain both contaminated groundwater and NAPL. The extent of contamination in the Middle Snake Hill Shale is

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G.E. HUDSON FALLS PLANT SITE (Continued)

1005650306

much larger. Contamination in this unit extends west out into the Hudson River and beneath Baker s Falls, as far north as Building 4A, and as far south as the GL&V facility. The contamination extends off the plant property however results indicate that the contaminants have not migrated a significant distance. The Lower Snake Hill Shale has contaminated groundwater and NAPL that extends west to beneath the Hudson River, south to the GL&V facility and north to Building 4A. The Glens Falls Limestone formation also contains contaminated groundwater and NAPL but the extent of contamination is much less than in the overlying units.

Health Problem: The site is currently vacant and completely fenced, which restricts public access. People may come into contact with residual contamination in soils or groundwater if they dig below the site cover. Contaminated groundwater at the site, which is hydraulically captured and treated, is not used for drinking or other purposes as the site and surrounding area is served by a public water supply that obtains water from a different source not affected by this contamination. Measures are in place to prevent impacts to surface waters of the Hudson River. Fishing is restricted to catch and release only from Hudson Falls to the Troy Dam. There are advisories (eat none or eat no more than 1 meal per month) on consumption of several fish species caught from the Hudson River below the Troy Dam to New York Harbor.

Hazardous Waste Summary:

Waste Code: D000

Waste Description: Not Defined

Waste Code: D001

Waste Description: Ignitable Waste

Waste Code: D002

Waste Description: Corrosive Waste

Waste Code: D003

Waste Description: Reactive Waste

Waste Code: D007

Waste Description: Chromium

Waste Code: D008

Waste Description: Lead

Waste Code: D009

Waste Description: Mercury

Waste Code: D027

Waste Description: 1,4-Dichlorobenzene

Waste Code: D029

Waste Description: 1,1-Dichloroethylene

Waste Code: D039

Waste Description: Tetrachloroethylene

Waste Code: D040

Waste Description: Trichloroethylene

Waste Code: D043

Waste Description: Vinyl Chloride

Waste Code: F001

Waste Description: The Following Spent Halogenated Solvents Used In Degreasing:

Tetrachloroethylene, Trichloroethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F002

Waste Description:

The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F003

Waste Description:

The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F005

Waste Description:

The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:

F006

Waste Description:

Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code:

F007

Waste Description:

Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code:

F008

Waste Description:

Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 11/30/2025	Source: Environmental Protection Agency

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/30/2025	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/03/2025	Telephone: (212) 637-3660

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City's Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

NEXAMP - MOREAU 2 AND 3
8-12 ELECTRIC DR
SOUTH GLENS FALLS, NY 12803

TARGET PROPERTY COORDINATES

Latitude (North):	43.280267 - 43° 16' 48.96"
Longitude (West):	73.605235 - 73° 36' 18.85"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	613170.8
UTM Y (Meters):	4792668.0
Elevation:	272 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50025648 HUDSON FALLS, NY
Version Date:	2023
Northwest Map:	50026355 GLENS FALLS, NY
Version Date:	2023

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
36091C0215E	FEMA Q3 Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
36091C0195E	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
HUDSON FALLS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Middle Ordovician (Mohawkian)
Code:	O2 <i>(decoded above as Era, System & Series)</i>

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Windsor

Soil Surface Texture: moderately decomposed plant material

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	1 inches	moderately decomposed plant material	A-8	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 42	Max: 6.5 Min: 4.5
2	1 inches	11 inches	loamy sand	A-8	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 42	Max: 6.5 Min: 4.5
3	11 inches	25 inches	loamy sand	A-8	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 42	Max: 6.5 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
4	25 inches	72 inches	loamy sand	A-8	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 42	Max: 6.5 Min: 4.5

Soil Map ID: 2

Soil Component Name: Windsor

Soil Surface Texture: moderately decomposed plant material

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

Soil Map ID: 3

Soil Component Name: Limerick

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 7 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.6
2	5 inches	44 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.6
3	44 inches	72 inches	loamy fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.6

Soil Map ID: 4

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 5

Soil Component Name: Hudson

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 54 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.01	Max: 8.4 Min: 6.6
2	7 inches	12 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.01	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 6

Soil Component Name: Rhinebeck

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.1
2	11 inches	37 inches	silty clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.1
3	37 inches	72 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

ASTM QUESTIONNAIRES

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

The following questionnaire is required by the ASTM Standard E 1527-21, which adheres to the All Appropriate Inquiries (AAI) Rule (United States Environmental Protection Agency) (40 CFR 312).

As defined by ASTM, the User of the report is the "party seeking to use Practice E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice."

PROPERTY ADDRESS:	Tax ID Section 50, Block 4, Lots 6, 11, 12, 13, 14, 16, 22, 23 and 25
PROPERTY CITY, STATE ZIP:	Moreau, New York 12803

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25)

Did a search of recorded land title records (or judicial records) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

☐ YES ☒ NO

2. Activity and use limitations (AULs) that are in place on the property or that have been filed or records against the property (40 CFR 312.26(a)(1)(v) and (vi))

Did a search of recorded land title records (or judicial records) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

☐ YES ☒ NO

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☒ YES ☐ NO

Consultant who completed this Phase 1 ESA, and prior ESA of adjacent property.

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ YES ☐ NO

UNKNOWN

5. Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

☐ YES ☐ NO

NA

a. Do you know the past uses of the property?

☒ YES ☐ NO

Historical records, maps and aerial photos were reviewed to determine past use.

b. Do you know of specific chemicals that are present or once were present at the property?

☐ YES ☐ NO

No chemicals were present during the recent site inspection.

c. Do you know of spills or other chemical releases that have taken place at the property?

☐ YES ☒ NO

d. Do you know of any environmental cleanups that have taken place at the property?

☐ YES ☒ NO

e. Do you have any prior knowledge that the property was developed as a gas station, dry cleaner, manufacturing/industrial facility in the past?

☐ YES ☒ NO

f. Are you aware of historical use of hazardous materials or petroleum products used or present on the property?

☐ YES ☒ NO

g. Do you know if the property is currently or was formerly equipped with underground storage tanks (USTs) or septic tanks?

☐ YES ☒ NO

No evidence of former tanks was observed or identified in the historical record.

h. Do you know of any past, threatened or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or occupant of the property?

☐ YES ☒ NO

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

☐ YES ☒ NO

As part of this study, which of the following are you providing?

1. Previous environmental site assessment reports ☐ Yes ☒ No
2. Environmental compliance audit reports ☐ Yes ☒ No
3. Environmental permits (including but not limited to solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits) ☐ Yes ☒ No
4. Registrations for underground and aboveground storage tanks ☐ Yes ☒ No
5. Registrations for underground injection systems ☐ Yes ☒ No
6. Material safety data sheets ☐ Yes ☒ No
7. Community Right-to-Know plan ☐ Yes ☒ No
8. Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc. ☐ Yes ☒ No
9. Reports regarding hydrogeologic conditions on the property or surrounding area ☐ Yes ☒ No
10. Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property ☐ Yes ☒ No

11. Hazardous waste generator notices or reports ☐ Yes ☒ No

12. Geotechnical studies ☐ Yes ☒ No

13. Risk assessments ☐ Yes ☒ No

14. Recorded Activity and Use Limitations (AULs). ☐ Yes ☒ No

Please contact us if you have any questions regarding these ASTM requirements.

TOWN HALL FOIL DOCUMENTATION

Date: 3/26/2026

Records Access Officer
Town of Moreau
351 Reynolds Road
Moreau, NY 12828-9261

Re: Freedom of Information Law Request

Dear Records Access Officer:

Under the provision of the New York Freedom of Information Law, Article 6 of the Public Officers Law, I hereby request copies of the following records (Please describe the records you request in as much detail as possible and attach additional sheets if necessary. If you wish to inspect the records only so indicate.):

TAX PARCELS, SECTION 50, BLOCK 4, LOTS 6, 11, 12, 13, 14, 16, 22, 23 and 25. (NINE LOTS)
REQUESTING HISTORICAL ASSESSOR'S CARDS, BUILDING PERMITS, DEMOLITION PERMITS,
PETROLEUM BULK STORAGE INSTALLATION PERMITS, REMOVAL RECORDS; DEED RESTRICTIONS AND
ACTIVITY AND USE LIMITATIONS (AULs) ON FILE AT THE TOWN. REQUESTING ELECTRONIC
COPIES SENT VIA EMAIL. SARATOGA COUNTY PARCEL INFO ATTACHED W/SCHEMATIC
I DO NOT NEED PLANNING/ZONING APPLICATION INFO FOR PROPOSED SOLAR FARM.

If there are any fees for copying the records requested, please inform me before filling the request.

I am aware that the fee is 25 cents per page for copies if done in-house or actual cost of reproduction if copying has to be done off-site. If documents have to be mailed I understand that I will be charged for the cost of the postage. I further understand that I will have to pay for the copies or actual cost of reproduction prior to my obtaining the copies.

I understand that the Freedom of Information Law requires that an agency, within five business days of the receipt of a written request, must make the record available, deny access in writing giving the reasons for denial, or furnish a written acknowledgment of receipt of the request and a statement of the approximate date when the request will be granted or denied.

Sincerely,

Dear Richard:

The Town is in receipt of your Freedom of Information Law requests dated March 26, 2026. Pursuant to Public Officer's Law 89(3)(a), the Town will review your requests and will notify you whether they are denied or granted within twenty (20) business days of this acknowledgement of receipt of your requests.

If granted, the Town will provide the applicable public records within said twenty (20) business day period, or will advise you of a date certain when the applicable records will be available.

Sincerely,

Erin Trombley

Quit Claim Deed

2008004199
2/1/2008 02:52:48 PM
DEED

Kathleen A Marchione Saratoga Co Clerk

RECORDED

THIS INDENTURE made the 22nd day of January, 2008

BETWEEN

THE TOWN OF MOREAU a Municipal Corporation, with offices for the transaction of business at Town Office Building, Box 1349, South Glens Falls, New York 12803

party of the first part, and

Moreau Industrial Park, LLC, a New York Limited Liability Company, with offices for the transaction on business located at 480 Broadway, Suite 250, Saratoga Springs, New York 12866,

party of the second part,

WITNESSETH, that the party of the first part, in consideration of One Dollar (\$1.00) lawful money of the United States, and other good and valuable consideration, paid by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, his heirs and assigns forever,

ALL those tracts, plots, pieces or parcels of land, with the buildings and improvements thereon erected, situate, lying and being in the Town of Moreau, Saratoga County, New York, and more fully described as Lots Numbers 1, 4, 6, 11, 12, 13, 14, 19, 20, 21 and 22 as shown on subdivision maps of Moreau Industrial Park prepared by The Saratoga Associates and filed in the Saratoga County Clerk's Office on March 18, 1992 in drawer #M-348 A-Z and AA-DD; and as modified by revised subdivision maps of Moreau Industrial Park prepared by The Saratoga Associates and filed in the Saratoga County Clerk's Office on February 16, 1994 in Drawer #M-398, A-S.

Subject to all easements, restrictions and reservations of record.

Also subject to the terms and conditions of a United States Army Corps of Engineers Permit, Application No 92-08860-YN issued March 1, 1993 which said terms and conditions requires that "the title or deed for each individual lot within the industrial park that contains waters of the United States, which includes wetlands, shall contain a clause requiring that

the lot owner contact the Corps of Engineers to determine if any additional authorization is required prior to undertaking and jurisdictional activities. A copy of the confirmed delineation of waters of the United States of the lands of Moreau Industrial Park shall be provided to each lot owner".

Grantor covenants that it has not done or suffered anything whereby the said premises have been encumbered in any way whatever.

Being a portion of the premises conveyed by Moreau Park, Inc. to The Town of Moreau by deed dated August 26, 1994 and recorded in the Saratoga County Clerk's Office on September 2, 1994 in Book 1393 of Deeds at Page 539.

Together with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

To have and to hold the premises herein granted unto the party of the second part, his heirs and assigns forever.

Subject to the provisions of Section 13 of the Lien Law.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

THE TOWN OF MOREAU

This image shows a full page of blank graph paper. The paper has a light cream or off-white color. A dark border, likely from the scanner, frames the top, left, and bottom edges. The grid consists of thin, dark horizontal and vertical lines intersecting to form small squares across the entire surface. There are no markings, text, or drawings on the paper.[illegible]

This image shows a full page of blank graph paper. The paper has a light cream or off-white color. A dark border, likely from the scanner, frames the top, bottom, and left edges. The grid consists of thin, dark horizontal and vertical lines forming small squares across the entire page. There are no markings, text, or drawings on the paper itself.
